

## Tinnitus: The Sound that comes from Nowhere

Ringling in the ears, buzzing, humming, or crickets are terms often used to describe Tinnitus. Nearly 50 million Americans experience some type of hearing loss, with approximately 20 million dealing with some type of Tinnitus.

Tinnitus is your brain's reaction to a loss of signal from your ear, it's not a disease in and of itself, but rather a symptom.

Do you experience symptoms of Tinnitus, but have been told that you will just have to live with it? Although, there is no cure, Susan has developed her own unique, proven treatment options. Over the past 18 years, Susan has had the opportunity to help hundreds of patients, by listening to each of their needs and treating symptoms individually.

Some of the personalized treatment plans include:

- listening to different types of sounds
- hearing aids with Tinnitus Sound Support™

Benefits treatment plans include:

- shifting Tinnitus to the background, where it belongs
- relief and relaxation, with attention away from your Tinnitus

Here are just a few comments from patients that have received help from Susan,  
*"My Tinnitus was overbearing at times. I thought there was no way Susan could help me. The devices she had me try not only restored my hearing, but after just a few minutes of wearing the devices, I felt more relaxed and calm. Hiliary Brown*

*After 4-6 weeks of wearing the devices, the noise in the front of my brain moved to the back of the brain! What a relief! It gave me a quality of life. Esther*

If you experience Tinnitus and would like to get some relief, contact Susan at Advanced Hearing Services, 970-221-5249.
